EDUCATION

Dr B R Ambedkar National Institute of Technology

B.Tech in Biotechnology

Jalandhar, India

2022 – 2026

PROFESSIONAL SUMMARY

Biotechnology undergrad at NIT Jalandhar with 3 internships at IIT Jammu, ISI Kolkata, and NEETprep, building end-to-end ML pipelines and data products. Delivered deep learning solutions for biomedical diagnosis, automated B2B data workflows, and full-stack analytics dashboards. Fluent in Python, SQL, TensorFlow, PyTorch, and modern cloud-adjacent stacks. Seeking analyst or AI/ML roles where data directly drives decisions.

EXPERIENCE

AI & Data Engineering Intern

NEETprep

Jan 2026 – Present

New Delhi

- Engineered automated ETL pipelines syncing HubSpot CRM with PostgreSQL, eliminating 8 hours/week of manual data reconciliation across 3 platforms.
- Built a Next.js analytics dashboard surfacing real-time lead conversion metrics, enabling the sales team to prioritize high-value prospects 2× faster
- Designed a multi-persona social media automation strategy that standardised posting cadence across 4 brand accounts, increasing content output by 60 percent

Data Science Intern

Indian Institute of Technology

June 2024 – July 2024

Jammu

- Developed a multimodal Parkinson's Disease detection model combining MRI image data (CNN) and clinical tabular data (XGBoost), achieving AUC of 0.91 on a 500-patient dataset.
- Reduced model inference latency by 35 percent through feature selection and pipeline optimisation, making the solution viable for near-real-time clinical screening.

Data Science Intern

Indian Statistical Institute

June 2025 – July 2025

Kolkata

- Built and benchmarked 5 ML classifiers (Random Forest, SVM, XGBoost, LSTM, CNN) on real-world datasets; top model achieved 94 percent accuracy and 0.93 F1-score. Automated the evaluation reporting pipeline using Pandas + Seaborn, cutting report generation time from 3 hours to under 20 minutes per experiment cycle.

PROJECTS

COVID-19 Data Analysis Dashboard | SQL, Tableau, Power BI

- Queried 200K+ rows of WHO COVID-19 data using advanced SQL (window functions, CTEs, subqueries) to derive country-level infection rates, mortality trends, and vaccination impact. Built an interactive Tableau/Power BI dashboard with date-range filters; reduced ad-hoc reporting requests by enabling self-serve exploration for non-technical stakeholders.

Hotel Booking Web Application | Next.js, REST APIs, Google Apps Script, PostgreSQL

- Designed and shipped a full-stack hotel booking system end-to-end: dynamic hotel pages, booking confirmation flow, payment workflow, and backend persistence — solo in 4 weeks. Automated booking data sync to Google Sheets via Apps Script, replacing manual record-keeping and achieving 100 percent data consistency across reservations.

TECHNICAL SKILLS

Languages & ML: Python, SQL, C; TensorFlow, PyTorch, Scikit-learn, XGBoost, CNN, LSTM

Data & Tools: Pandas, NumPy, Tableau, Power BI; Git, PostgreSQL, REST APIs, Next.js
